

NIBL

Week 6/4-6/10

### Summary:

- Bevel: completed fmripred, onsets, preproc (part one?), next step?
- Eric: fmripred (currently running for all sessions), → need onsets, and preproc
- BBx: completed fmripred → parse onsets, and preproc
- Breakfast club: run BIDS/fmripred --longitudinal (multi-sess)
- SugarMama: BIDS completed and onsets, run fmripred, preproc
- BRO data: what is? run BIDS/fmripred
- Get key/card for access
- Send Brian summary with pic

### Concerns:

- IF using BIDS for future, will have to rearrange directories
- Skull Stripping/fmripred -- anything to worry/run there?

### Eric Data(Chocolate) logs - anything relevant?

```
[nbytes@ht3 cs001]$ ls
```

```
